execution order

Input		
1	**Pre-process**	intensity scaling; quality flags
Tooth localization		
2	**Detect**	tooth boxes, score ≥ 0.3
3	**Number**	FDI code or ‘unassigned’
4	**Segment**	instance masks (optional)
5	**Match**	mask ↔ box, IoU ≥ 0.5
Finding classification		
6	**Classify**	softmax over 4 classes
7	**Classify, flipped**	same crops, mirrored
Stability check		
8	**Flip passes**	detector and segmenter on the mirrored image
Aggregation		
9	**Region records**	signals, flags, review need
10	**Final result**	top class per tooth

Report draft
status: unconfirmed draft

Review queue
images ordered by combined score

A step that cannot run is recorded as unavailable or failed; independent steps still run.
