
Stored analysis
region records: box, FDI code or 'unassigned', closest class, raw score, uncertainty, review flags
Evidence bundle
one finding per region with a stable id (F1, F2, ...); model versions
mode: template (default) or llm
Template generator
deterministic sentences; deployed and used for every report
LLM rewording
optional OpenAI-compatible endpoint, temperature 0, de-identified findings; not configured, never run live
Report validator
schema and required fields; findings match the evidence (FDI, label, score, uncertainty); valid FDI codes; no tooth, number or finding name absent from the evidence; no diagnostic or treatment phrases
passed
failed (LLM text)
English research draft
status: unconfirmed research draft; disclaimer and limitations attached
Rejected
LLM text discarded; the template draft is used and the reasons are recorded
Hindi and Marathi
fixed sentence templates; values copied verbatim; localization check
Reviewer sign-off
named reviewer; status becomes reviewed research draft
Export
HTML, TXT or JSON in the chosen language
