
1. Patient inputs
Medical reports / laboratory results
X-ray images
MRI / DICOM (future phase)
Symptoms and history
Previous dated records
2. Secure patient data
Login and profile
Patient-specific records
Date-wise history
3. Multimodal interpretation
Pretrained multimodal models
Structured findings and values
Evidence and uncertainty
4. Longitudinal health analysis
Compare current and previous records
Trend detection
Patient health summary
5. Medical RAG and verification
Condition-specific knowledge
Evidence-grounded explanation
Clinician review if needed
6. Patient-centred outputs
Potential findings / risk signals
Explainable timeline
Suggested next steps / specialist category
Evaluation and iterative improvement
