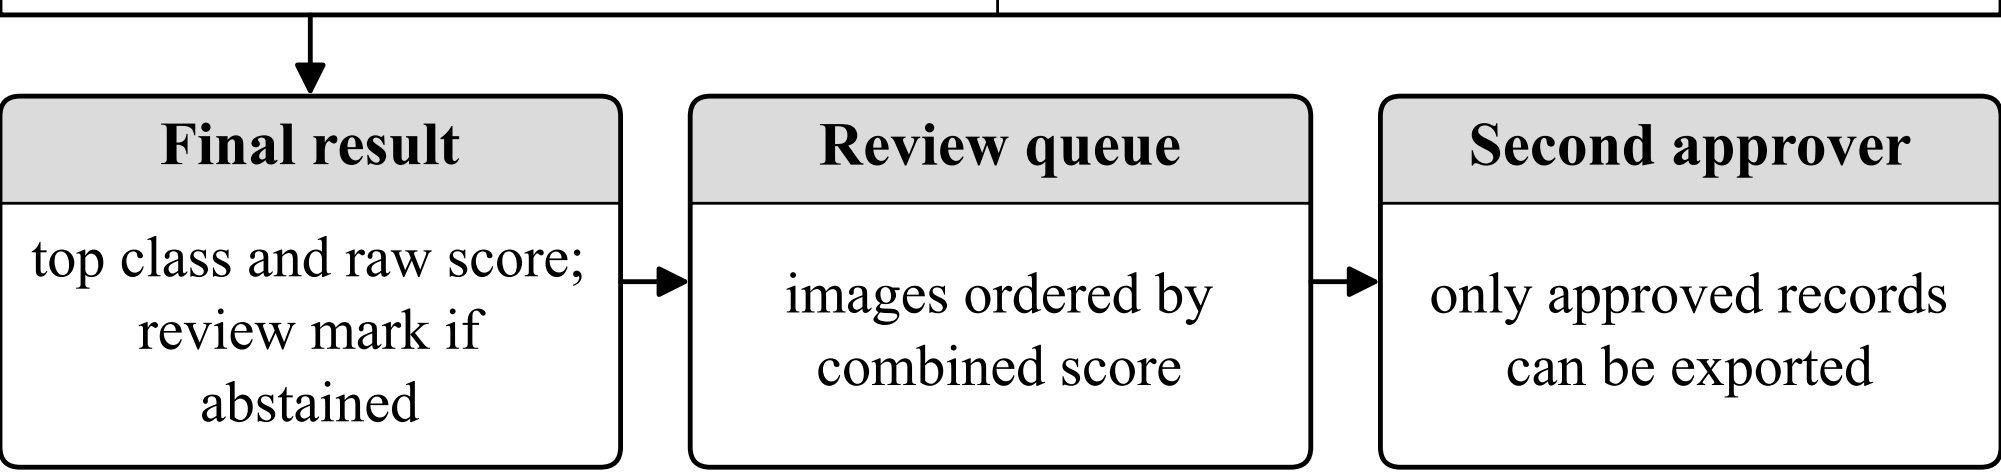
Deployed in the application

Signal and threshold	Flag (region sent to review)
normalized entropy ≥ 0.397	‘abstained’
flip disagreement ≥ 0.076	‘unstable under flip’
mask instability ≥ 0.30	‘mask unstable’
detection score < 0.50	‘low detection score’
numbering issue or no number	numbering flag



Evaluated offline only (not deployed)

- temperature scaling, T = 0.95 fitted on calibration (app scores stay raw)
- 33 alternative abstention rules; the best candidate failed on validation
- retraining with approved reviews: implemented, never run
